

## 3D Photorealistic Renderings

Our 3D architectural renderings will bring your vision and project to life, in vivid color and stunning depth. Using the latest, state of the art 3D Rendering technology, our 3D illustrator can provide you with high quality, 3D architectural renderings on time and at the lowest cost.

### Benefits to contractors and developers

Photorealistic exterior and interior renderings will allow viewers to see your vision for the project, to convey its advantages over the competition and to evaluate impact on surroundings areas. Our renderings can include customized lighting effects, texturing, vegetation, surrounding spaces such as neighboring buildings and parking lots and objects such as cars, signs, and people. If you have a picture of the building lot(s), these can be used as backdrops for your rendering. Because we provide high quality renderings, they are often indistinguishable from real buildings and allow us to seamlessly place them into existing photographs to provide the ultimate before and after displays.

After purchasing your rendering from Home Designing Service, Ltd., you may choose from a variety of advertising packages that use those renderings to help you sell to your clients. These packages have been thoughtfully planned just for builders. All the packages include a matted and framed copy of your rendering that will look fabulous hanging in your office or model home. In addition, choose from an extensive array of marketing materials including: one-sided ad sheets, full color brochures, or full color post cards.

### Key Benefits

- communicate your vision
- attract new home buyers
- gain a competitive advantage
- market your services
